

Simon Davies
University of Bath
EC10003 – Introductory Statistics

Additional Notes: Class8

(1) For those of you who have the 5th edition, please see the below table (note, not all are included here and there are additional questions in the 6th ed.. It's always best to check yourself too in case I've made a mistake!) Hope this helps.

6th Edition Question Number	5th Edition Question Number
8.6	8.4

(2) The questions in chapter 7 have all changed, but the same numbers can be done in the 5th edition for practice because the ideas behind the questions are all the same (it seems to me).

(3) It looks to me like there is a small error in the calculation of the Variance for \bar{X} in the solutions for NCT 8.6 and the relative efficiencies in the same question.

(4) Note questions 7 and 9 from last year's final exam.

(5) Some of the questions this week are quite tough. Use the solutions to help you if need be, and skip to the next question and go back if you get stuck – you don't have to answer them in order!
